

Badr Salah Eldin Ibrahim Mohamed

Cybersecurity Student | SOC Analyst | Front-End Developer

+20 01203608795 | badrsalah012@gmail.com | linkedin.com/in/badr-salah-378a72293 | github.com/badr554 | Alexandria, Egypt

PROFESSIONAL SUMMARY

Fourth-year Cybersecurity student (GPA 3.5) with hands-on experience in SOC operations, threat detection, network defense, and secure web development. Proficient in front-end development using React.js, TypeScript, Tailwind CSS, and Bootstrap, with a strong eye for building clean, responsive, and security-aware interfaces. Completed a comprehensive SOC Analyst Track and actively competes in CTF challenges (TryHackMe Top 6%). Skilled in Splunk SIEM, FortiGate, and full-stack security-aware development. Seeking a cybersecurity or secure development role to apply expertise across both blue team operations and modern web environments.

EDUCATION

B.Sc. in Cybersecurity — Arab Academy for Science, Technology & Maritime Transport 2021 – 2026

College of Computing and Information Technology | GPA: 3.5 / 4.0 | Alexandria, Egypt

TECHNICAL SKILLS

SOC & SIEM: Splunk (SPL, dashboards, real-time alerts), Log Analysis, Threat Detection, Incident Response

Network Security: FortiGate, IPS/IDS, DoS/DDoS Defense, GeoIP Blocking, Traffic Shaping, Wireshark, Nmap

Penetration Testing: SQLi, XSS, CSRF, IDOR, Privilege Escalation, Metasploit, Burp Suite, Ettercap, hping3

Malware Analysis: Static & Dynamic Analysis, Regshot, Procmon, FakeNet, ProcDot, C2 Communication

Cryptography: DES, AES, RSA, Diffie-Hellman, Kerberos, JWT, RBAC

OS Security: Buffer Overflow Exploitation, ASLR Implementation, xv6 Kernel, Linux & Windows

Development: HTML, CSS, JavaScript, TypeScript, React.js, Bootstrap, Tailwind CSS, Python, Java, Bash, REST APIs, Git

Other: Threat Modeling (STRIDE), OpenVAS, Machine Learning (scikit-learn, TF-IDF)

PROJECTS

SecuLearn — Cybersecurity E-Learning Platform — Graduation Project 2024 – 2026

- Built a full-stack React.js platform with RBAC for Lecturers, Teaching Assistants, and Students; features course management, timed quizzes, and assignment workflows.
- Developed a built-in CTF challenge system with categories (Web Exploitation, Cryptography, Reverse Engineering, Network Analysis, Binary Exploitation), difficulty levels, hints, and point scoring.
- Implemented JWT-based authentication, protected API routes, and a real-time analytics dashboard for tracking student performance and submission rates.

SOC Implementation & Network Defense — Professional Training Project 2025

- Built a SOC environment using Wazuh and FortiGate; configured firewall rules, NAT, GeoIP blocking, IPS sensor, and traffic shaping policies.
- Wrote custom Splunk SPL queries to detect tcp_syn_flood and tcp_port_scan anomalies; built dashboards and automated real-time email alerts to the SOC team.
- Simulated DoS/DDoS attacks using hping3 and MITM attacks via Ettercap with ARP poisoning; verified detection and mitigation through Splunk log correlation.

Penetration Testing & Web Exploitation — Academic Lab Project 2024

- Performed full pentest lifecycle: Reconnaissance → Scanning → Exploitation → Privilege Escalation.
- Exploited SQLi, XSS, CSRF, and IDOR vulnerabilities; achieved full system compromise in controlled lab environments.

Malware Analysis & Threat Investigation — Academic Project 2024

- Conducted static and dynamic malware analysis; identified persistence via registry Run key and unauthorized PowerShell interactions.
- Used Regshot, Procmon, FakeNet, ProcDot, and Wireshark for behavioral profiling and C2 communication analysis.

Buffer Overflow & OS Security — CCY4304 Assignment 2024

- Exploited stack-based buffer overflow vulnerabilities and crafted custom payloads for controlled code execution.

- Implemented ASLR as a kernel-level security mechanism in the xv6-riscv operating system.

Cryptography System — Academic Project — Dr. Ayman Adel 2023

- Implemented DES, AES, RSA, and Diffie-Hellman algorithms with secure key exchange workflows from scratch.

Network Security & Kerberos Authentication — CCY3201 2023

- Deployed a Kerberos KDC and implemented client-server authentication in Java and Python; verified traffic integrity using Wireshark.

Machine Learning for Security — Academic Project 2024

- Built a spam detection model using TF-IDF and machine learning classifiers; achieved 97% accuracy.

Vulnerability Assessment — Academic Lab 2024

- Scanned and assessed systems using Nmap and OpenVAS; exploited vulnerabilities using Metasploit (EternalBlue).

Threat Modeling — Academic Project 2024

- Applied STRIDE methodology to design secure systems with RBAC and robust authentication mechanisms.

CERTIFICATIONS & ACHIEVEMENTS

- SOC Analyst Track — Comprehensive course covering SIEM, log analysis, threat intelligence, and incident response.
- Front-End Development Diploma — Eraasoft Academy, 4-month program, completed December 2024.
- TryHackMe — Ranked in the Top 6% globally across offensive security, CTF, and threat detection challenges.

ADDITIONAL INFORMATION

Languages: Arabic (Native), English (Professional)

Interests: SOC Analysis, Threat Hunting, SIEM Engineering, Blue Team, Front-End Development, CTF Competitions

Availability: Open to Remote, Hybrid, or On-site opportunities
